Subject:	Proposed straw-man letter to Sun supporting an unencumbered SE license for Apache
Attachments:	Apache Letter to Jonathan v2.doc;oracle_sig_logo.gif

Importance:	Normal
Priority:	Normal
Sensitivity:	None

Edward,

Attached is a straw-man letter that we plan to share with other
companies starting early next week. We've received verbal statements of
support (qualified by them having to see the specifics of the
communication) from Google, HP and Intel, and are pursing with IBM (and
expect that they'll also want to participate).

Our current thinking is that, once we have agreement from the core
group, we will invite others to join as signatories (but we will go
forward regardless of how many others join). Although we haven't made
any final decisions or promises to the other companies, Peter and I are
thinking that initially the letter should be private to Jonathan
Schwartz, with a stealth blog leaking of the industry support for
Apache. We have heard from some companies that it would be easier to
get agreement for a private versus a public letter.

Please let me know by return email (or possibly at CAG staff meeting on
Monday) whether we can go forward with the draft letter.

Cheers...Don

DRAFT v2 – Confidential

June XX, 2007

Jonathan Schwartz
Chief Executive Officer and President
Sun Microsystems, Inc.
4150 Network Circle
Santa Clara, CA 95054

Jonathan,

We write to ask for your assistance in resolving an outstanding concern of the Java
community, namely the release of the Apache Software Foundation's (ASF) open source
version of Java SE. As you are aware, the ASF has been working with Sun to secure an
acceptable license for a Java Compatibility Kit (JCK) for the Apache Harmony project.
The current license offered by Sun has restrictions that are unacceptable and do not
reflect the spirit of the Java Community Process (JCP). In short, we seek the release of a
JCK license to ASF that is unencumbered by any field of use constraints.

A release of an unencumbered license is simply the right thing to do, and is consistent
with your belief that by embracing openness (open standards and open source),
businesses can create "opportunity wherever the network can reach". Critically, we also
believe that by precluding ASF from releasing Harmony, Sun will drive the open source
community away from the Java community. Direct inclusion of the open source
community is needed so that developers embrace, and not reject Java technologies. Such
inclusion is essential to the future of Java, and all of our investments.

Field of use restrictions on ASF's Harmony project are contrary to the interests of the
Java community at large, and such restrictions appear to benefit only one party. By taking
such a step Sun would make it clear that the JCP is not the collegial community that to
date has benefited from Sun's stewardship of the process. This would provide an
unfortunate proof point for critics that claim Sun has too much control over the JCP.
Contradicting the notion that the JCP is an open process, Sun has placed the JCP in a
precarious position. Without a successful resolution of the ASF's concerns, the Java
community that is important to all of our interests is a risk of fracturing, an end result
contrary to our collective interests.

We look forward to your response.
